

CS375 — Reverse Turing Test

User Acceptance Testing (UAT) Document

Team: Karthik Reddy Akkala, Jkhari James Harris, Samuel Nevin Boger
Version: 1.0 | Last Updated: April 2026

1. Purpose

This document describes the User Acceptance Testing (UAT) plan for the Reverse Turing Test game. Each test corresponds to a functional requirement from the project requirements document. Tests are written for non-technical end users and describe step-by-step instructions along with the expected outcome if the requirement is correctly implemented.

2. How to Use This Document

For each test:

- 1. Read the Precondition column. If another test is listed, complete that test first.
- 2. Follow each step in the Steps column exactly as written.
- 3. Compare what you see on screen to the Expected Result column.
- 4. Mark the Pass or Fail column with a checkmark or X.
- 5. Record any observations or issues in the Notes column.

3. Test Summary

Total Tests	Requirements Covered	Tests Passed	Tests Failed
14	Start, Names, Personalities, Questions, Response, Display, Voting, Elimination, Win/Lose, Reset		

4. Test Scripts

Test ID	Requirement	Steps	Expected Result	Pass	Fail
UAT-01	Start Button Initializes the Game	6. Open the game in your web browser. 7. Read the rules displayed on the screen. 8. Click the "Start the game" button.	The game begins. You are assigned a random player name, a question is displayed, and AI responses appear on screen. The		

Test ID	Requirement	Steps	Expected Result	Pass	Fail
		9. Wait for the game to load.	round number shows "Round 1".		
UAT-02	All Players Are Assigned Unique Random Names <i>Precondition: UAT-01 must be completed first.</i>	10. Start the game (see UAT-01). 11. Note the name shown next to "You are playing as:". 12. Note the names shown next to each AI response. 13. Compare all five names — yours and the four AIs.	All five names are different from one another. No two players share the same name. The names appear to come from a varied, fun list (not generic placeholders like "Player 1").		
UAT-03	All Players Are Assigned Random Personality Traits <i>Precondition: UAT-01 must be completed first.</i>	14. Start the game (see UAT-01). 15. Read through each AI response carefully. 16. Play through at least two rounds by clicking "Next round". 17. Compare AI response styles across both rounds.	Each AI has a distinct writing style or tone that stays consistent across rounds (e.g., one might sound formal, another sarcastic). The personality does not change mid-game.		
UAT-04	A Random Question Is Asked Each Round <i>Precondition: UAT-01 must be completed first.</i>	18. Start the game (see UAT-01). 19. Note the question displayed in the "Question" section. 20. Submit a response and complete the voting phase. 21. Advance to the next round. 22. Note the new question displayed. 23. Repeat for a third round if possible.	A different question appears each round. The same question is not repeated during the same game session.		
UAT-05	Human Player Can Submit a Response (Max 255 Characters) <i>Precondition: UAT-01 must be completed first.</i>	24. Start the game (see UAT-01). 25. Click on the text box labeled "Your response:". 26. Type a short answer to the question. 27. Click "Submit response". 28. Observe that your answer appears below the input box. 29. Now try typing a very long answer (more than 255 characters).	Your submitted answer appears on screen with your player name. When typing beyond 255 characters, the text box stops accepting additional input — you cannot exceed the limit.		
UAT-06	All Answers Are Displayed After Submission <i>Precondition: UAT-01 and UAT-05 must be completed first.</i>	30. Start the game (see UAT-01). 31. Read the question shown on screen. 32. Type an answer in the text box and click "Submit response". 33. Observe the full list of answers on the screen.	Four AI answers are visible before you submit. After submitting, your own answer also appears with your player name. All five answers are visible at the same time.		
UAT-07	Voting Phase Begins After All Answers Are Shown <i>Precondition: UAT-06 must be completed first.</i>	34. Start the game and submit your answer (see UAT-06). 35. Look for the "Voting Phase" section that appears after submitting. 36. Confirm that a list of player names is shown with a radio button next to each.	After submitting your answer, a "Voting Phase" section appears. It shows the names of all active AI players and asks you to pick one. Your own name is not listed as a vote option.		

Test ID	Requirement	Steps	Expected Result	Pass	Fail
UAT-08	Human Player Can Cast a Vote <i>Precondition: UAT-07 must be completed first.</i>	37. Reach the Voting Phase (see UAT-07). 38. Click the radio button next to any player name. 39. Click "Submit vote". 40. Wait for the results to appear.	Your vote is registered. The screen transitions to the Vote Results section, which shows a vote count for each player and announces who was eliminated.		
UAT-09	AI Players Also Vote Each Round <i>Precondition: UAT-08 must be completed first.</i>	41. Cast your vote and reach the Vote Results screen (see UAT-08). 42. Look at the vote count shown for each player.	The total number of votes shown across all players is 5 (1 from you + 4 from the AIs). Some players may have received more than 1 vote, reflecting that the AIs also participated in voting.		
UAT-10	The Player With the Most Votes Is Eliminated <i>Precondition: UAT-09 must be completed first.</i>	43. Reach the Vote Results screen (see UAT-09). 44. Read the vote counts listed for each player. 45. Note which player had the highest vote count. 46. Read the elimination announcement below the results.	The player announced as eliminated is the one with the most votes. In the next round, that player's name no longer appears in the AI responses or in the voting options.		
UAT-11	Game Ends With Defeat if the Human Is Voted Out <i>Precondition: UAT-08 must be completed first. This test may require multiple rounds for the human to be voted out, or can be tested by observing behavior if the human receives the most votes.</i>	47. Play the game normally across multiple rounds. 48. If the human player is eliminated (receives the most votes in a round), observe the screen.	A clear defeat message appears on screen (e.g., "You were voted out! The AIs win."). A "Play again" button is displayed. The game does not continue to another round.		
UAT-12	Game Ends With Victory if All AIs Are Eliminated <i>Precondition: UAT-08 must be completed first. This test requires playing through enough rounds to eliminate all 4 AIs.</i>	49. Play through multiple rounds, successfully voting out an AI each round. 50. After the fourth AI is eliminated, observe the screen.	A clear victory message appears (e.g., "All AIs have been eliminated! You win! 🎉"). A "Play again" button is displayed. No further rounds are offered.		
UAT-13	Eliminated Players Do Not Appear in Future Rounds <i>Precondition: UAT-10 must be completed first</i>	51. Successfully vote out an AI in round 1 (see UAT-10). 52. Click "Next round" to advance. 53. Count the AI responses shown in round 2. 54. Check the voting options in round 2.	Only 3 AI responses appear in round 2 (down from 4 in round 1). The eliminated player's name does not appear in the voting options.		

Test ID	Requirement	Steps	Expected Result	Pass	Fail
	(at least one AI eliminated).				
UAT-14	Play Again Resets the Game to Its Initial State <i>Precondition : UAT-11 or UAT-12 must be completed first (game must have ended).</i>	55.Reach the end of a game (win or lose). 56.Click the "Play again" button (or "Reset the game" button). 57.Observe the screen after clicking.	The game returns to the starting screen with the rules and start button. All previous round data, player names, and scores are cleared. Clicking "Start the game" begins a brand new game with fresh names, personalities, and questions.
